

YOUR NAME

Cybersecurity Analyst & Certified Ethical Hacker | B.E. Computer Science & Engineering

Salem, Tamil Nadu, India · +91 90000 00000

you@yourhandle.dev · github.com/yourusername · linkedin.com/in/yourusername

PROFESSIONAL SUMMARY

Security engineer with a B.E. in Computer Science and hands-on offensive and defensive experience: 9 scoped VAPT engagements delivered, one year of SOC triage (Splunk/Wazuh), and detection-as-code shipped to production teams.

Writes the proof-of-concept, the fix and the report a manager can forward — 31 developer-validated findings, mean remediation time cut from 34 to 11 days. 2 CVEs credited, 9 valid VDP/bounty reports, 18 public writeups.

CORE SKILLS

Offensive: Web & API pentesting (OWASP WSTG/ASVS), network + Active Directory attacks, privilege escalation, recon/OSINT, Burp Suite Pro, Nmap, Metasploit, BloodHound

Defensive: SIEM engineering (Splunk, Wazuh, ELK), detection-as-code (Sigma), Suricata/YARA, incident response, threat hunting (ATT&CK), Volatility/Autopsy forensics

Engineering: Python, Bash, SQL, C, Linux hardening, Docker, AWS security, GitHub Actions, Semgrep/Bandit CI gates

EXPERIENCE

Security Analyst & Freelance Penetration Tester — Independent

2025 – Present · Salem / Remote

- Delivered **9** scoped web, API and network assessments for SaaS and retail clients; produced CVSS-scored reports with per-finding remediation patches and regression tests.
- Built a reusable reporting kit (templated DOCX, CVSS calculator, evidence hashing) that halved turnaround between last test and final report.
- Ran ransomware and third-party-compromise tabletop exercises for leadership; retested every fix at no extra cost.

SOC Intern (L1 -> L2 triage) — [Client Name] Cyber Defense

2024 – 2025 · Chennai / Hybrid

- Triaged **~120** alerts/week in Splunk; escalated **14** true positives including a credential-stuffing wave and one beaconing host found by correlation, not by the vendor rule.
- Automated IP/asset enrichment in Python (geo -> ASN -> reputation), cutting average triage time by **4 minutes** per alert.
- Authored 6 Sigma detections and 3 IR runbooks adopted across the full shift.

Founder & Lead — College Cybersecurity Club and CTF team '0xSalem'

2023 – 2024 · Campus

- Grew membership from 12 to **90+**; ran weekly labs on Wireshark, Burp, privilege escalation and malware triage.
- Designed and defended an internal Jeopardy CTF for 140 players; top-15 finish in 3 inter-collegiate CTFs.

PROJECTS

Sentinel-SOC — full blue-team pipeline (Winlogbeat + Sysmon -> Wazuh -> Suricata -> TheHive) with 40 unit-tested Sigma rules and a Slack alert bot.

VulnScan AI — continuous attack-surface scanning (subdomain enum -> httpx -> nuclei) with LLM triage, dedupe and automatic ticket drafting.

PhishGuard — phishing URL detector: 32 lexical/WHOIS features, gradient-boosted classifier at 0.96 F1, shipped as a browser extension and an ICAP service.

KeyHunt — YARA + entropy secret-leak hunter for CI artefacts and container layers. **TokenSentry** — JWT/OAuth misconfiguration checker. **CryptoVault** — Argon2id + AES-256-GCM file encryptor.

EDUCATION

B.E. Computer Science & Engineering — [College Name], Anna University

2021 – 2025 · CGPA 8.6 / 10

- Coursework: Operating Systems, Computer Networks, DBMS, Compiler Design, Cryptography & Network Security, Machine Learning.
- Final-year project: 'Adaptive IDS for IoT using lightweight ML' on a Raspberry Pi cluster — departmental best-project shortlist.

CERTIFICATIONS & RECOGNITION

eJPTv2 — Junior Penetration Tester (INE, 2025) · CompTIA Security+ SY0-701 (in progress, Q4 2026) · HTB CPTS (coursework 80%) · CEH Practical, BTL1 (planned)

Hack The Box: 42 machines owned · TryHackMe: 97 rooms · 1,240 logged lab hours · Finalist, National Hackathon security track (top 8 / 240) · Dean's List x4
